Baytown Chemical Plant, Growth

Lakewood Civic Association Meeting

Energy lives here™

- Studying addition of two units
- Baytown is a potential location
- Construction 2019-21
- 150 long term jobs
- Permit application filed Nov'17
- Considerations:
 - Minimize emissions / noise
 - Manage construction traffic
 - Community outreach

ExxonMobil Pipeline Company

Energy lives here™

Nicolas Medina

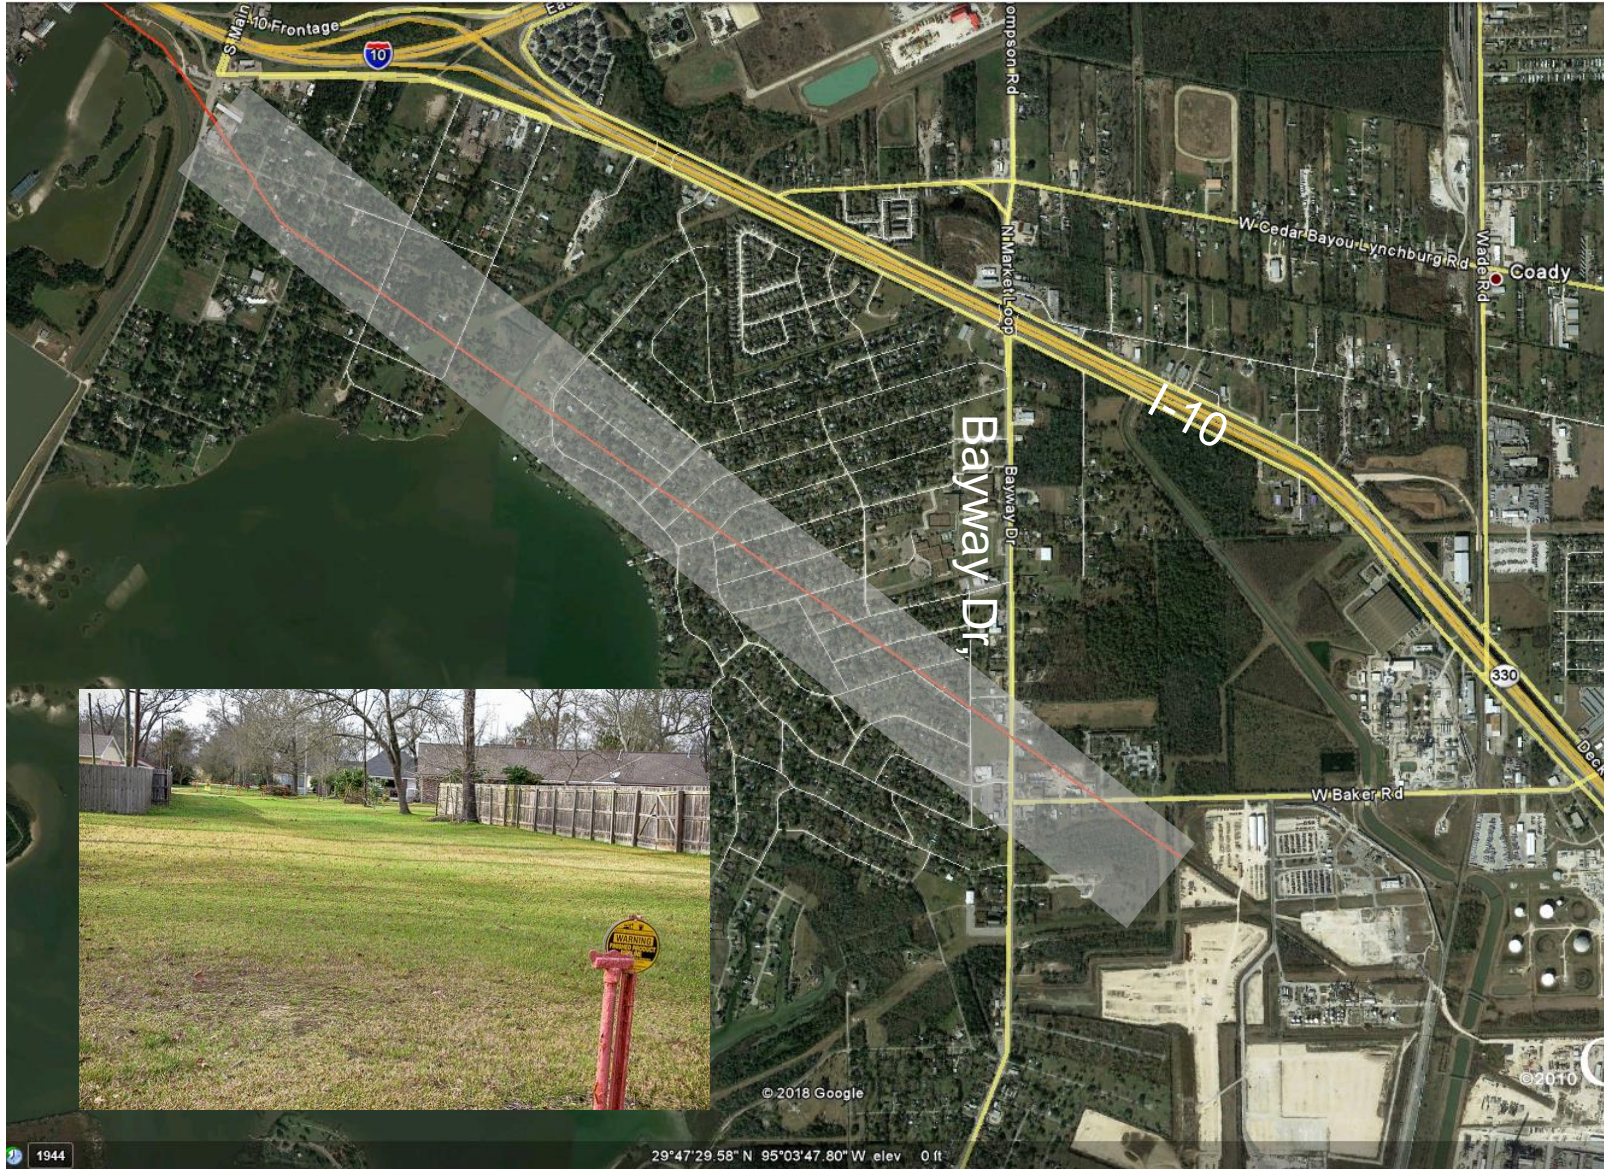

ExxonMobil Pipeline Company, Public and Government Affairs Manager

ExxonMobil Pipeline Company in Baytown

- Safety of our neighbors and personnel is our priority
- Operator of crude, refined product and chemical pipelines

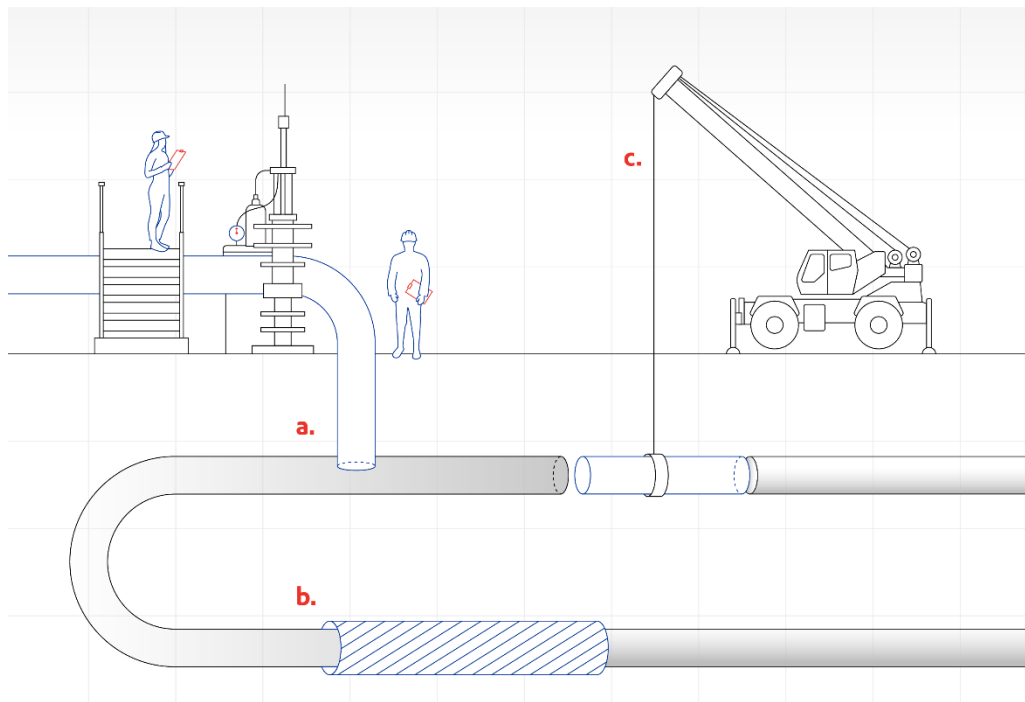

Map

Integrity Management Program (IMP)

- A risk-based approach to pipeline safety, required by federal regulation
- Includes rigorous testing and analysis
- Designed to identify areas that need repair or replacement

a. PRESSURE REDUCTION

Temporarily reducing a pipeline's operating pressure lowers stress on potentially damaged segments and mitigates the risk of a release while the issue is fully investigated and repaired.

b. SLEEVES

Some localized repairs are made using a steel or composite "sleeve." The sleeve fully encircles a small area of the pipe that may benefit from additional reinforcement.

c. REPLACEMENT

Sometimes it is more effective to completely replace a pipeline or a segment of pipeline. New pipe is typically laid along the existing right-of-way to limit environmental and community disruption. The older line is safely decommissioned and left in the ground once the new pipeline is operational.

Upcoming Baytown-area maintenance work

- Early- to mid-2019: pipeline maintenance in Baytown and East Harris County
- Lakewood neighborhood: Replacement of about two miles of our existing crude oil pipeline
 - Between I-10 and the northwest corner of our refinery fence
- Identified through our Integrity Management Program for replacement.
- About 4-6 weeks to complete

Timeline of maintenance activities

Early 2018

- Surveys
- Soil sampling

Mid-2018 – Early 2019

- Final planning
- Permitting
- Temporary workspace acquisition
- Community outreach

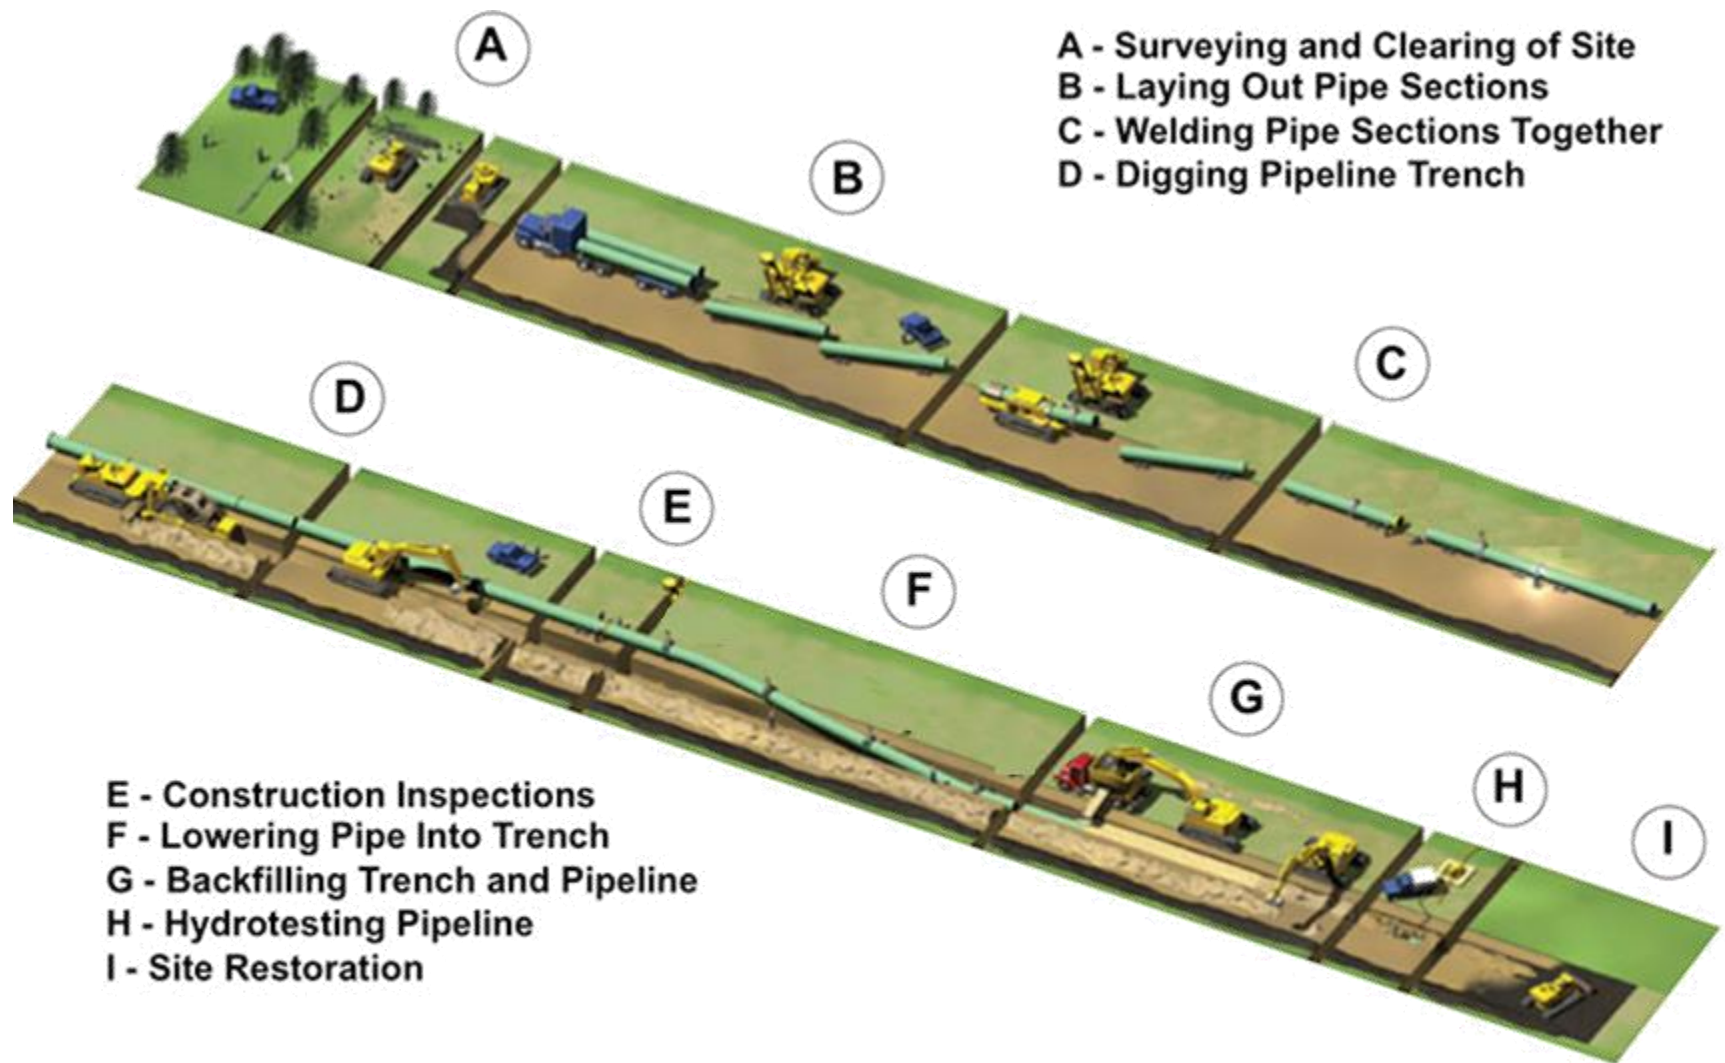

Early/Mid-2019 – Fall 2019

- Continued community outreach
- Mobilization
- Field work, construction
- Tie-in, testing
- Startup

geotechnical bores safely completed at Slap Out Gully on March 23, 2018

What to expect: Pipeline activities

Our commitment

- All of our pipelines will continue to be safely maintained and operated in accordance with industry standards and all local, state and federal laws and regulations.
- Through all stages of our work, ExxonMobil Pipeline Company will make information available to the community about our work.
- ExxonMobil Pipeline Company will consult with individual residents regarding access to our easements on their property.
- ExxonMobil Pipeline Company will seek to minimize disruption during our work and to limit inconvenience to community members.
